PERSONAL SUMMARY

An ambitious problem solver with a passion for entrepreneurship, online businesses, I am eager to join a team of like-minded developers. I have deep experience in creating logical and innovative solutions to complex problems.

A lover of being 'pixel perfect', I am thorough and precise in everything I do, and have a keen interest in technology, responsive websites, user interface and user experience. I am described by my co-workers as a pragmatic teammate and a realist, who can grasp ideas while still paying attention to minor details. I have a well-deserved reputation as someone who is diligent, personable, and trustworthy.

As someone who takes responsibility for my own personal development, I am continually evaluating and upgrading my skills to stay on top of cutting edge front end web development trends.

I am looking for a suitable position with a company where my outstanding performance is recognized and where I can work on a variety of high-profile projects.

CARRER HISTORY

Lead Front End Web Developer
TALENTODAY, 75008 Paris

13 OCT 2013 - PRESENT

Talentoday, my first startup experience, is an international company with offices in Paris and San Francisco, built as a personality assessment for consumers and a SaaS software for professional HR firms and staffing agencies.

Hired as the first member of the engineering team and the only Front End developer, I was involved in the UX/UI conception process and the web development of a multi-million user web platform with extremely high daily traffic. Starting from scratch, I developed and integrated every piece linked to the front side of the platform such as an editable user dashboard, a back-office for the website, a Business website to present the products, company information, technology, and the team, and finally the SaaS software Talentoday Manager.

Achievements included:
- Developed unique data visualization charts using Chart.js and D3.js libraries.
- Developed an editable user profile.
- Developed a PDF report dedicated for the consumer and the HR manager.
- Developed a back-office to administer the website.
- Developed an analytics back-office with multiples charts.
- Developed a SaaS software dedicated for HR Manager.
- Developed a Business Website to showcase the company, the products and team.
- Developed a blog dedicated to the company using the Wordpress CMS.
- Participated in the migration of the whole website into AngularJS.
- Managed an international team of translators in order to manage four languages present on the website.

Junior Web Developer
GRIS-METAL SAS, 75020 Paris

28 JAN 2013 - 02 AUG 2013

As a six-month position carried out at the end of my Degree at the University of Limoges, I worked in Gris-Metal web agency based in the Paris area and composed of a small team with a director, developer and two graphic designers.

Self-motivated, I learned how to work alone and build beautiful and responsive websites based on a sketch from graphic designers. I also had to take feedback directly from the clients and to organize and lead training seminars to help the clients with their back-offices.

Achievements included:
- Developed multiple websites using technologies such as PHP, HTML5, CSS3, JQuery and Wordpress CMS :
    - http://www.alliance7.com
    - http://dominiqueclerc.com
    - http://www.franceoriginelle.com
    - http://www.anninaroescheisen.com
    - http://proaidautisme.org
- Organized and lead training seminars for agency clients.
